PROFESSIONAL SUMMARY

Python developer with expertise in automation, web scraping, data processing, and open-source development. Passionate about building tools that solve real problems. Experienced in BeautifulSoup, Selenium, Playwright, Pandas, NumPy, and Django. Creator of metascrub — a CLI tool for AI metadata stripping. Strong Technical SEO knowledge with focus on structured data, accessibility, and Core Web Vitals. Active open source contributor and AI/ML enthusiast.

EXPERIENCE & MILESTONES

2026

Published metascrub on PyPI

Released metascrub, a CLI tool for stripping AI metadata from images. Supports C2PA manifest parsing, multi-format cleaning, and realistic EXIF injection.

Python CLI EXIF PyPI

2026

Started Technical SEO Writing

Began writing about Technical SEO, structured data, accessibility, and Core Web Vitals to share practical knowledge with the community.

SEO Writing Web

2025

Built First Automation Project

Created Python-based automation tools for web scraping and data processing using BeautifulSoup, Selenium, and Playwright.

Python Automation Web Scraping

2024

Started Learning Python

Began programming journey with Python, focusing on automation, data analysis, and web development.

Python Learning

OPEN SOURCE PROJECTS

ZuZu Autobot

Fully automated web scraping and notification bot that crawls GSMArena for the latest devices, extracts detailed specifications, downloads images, and sends Telegram alerts — all powered by GitHub Actions on a daily schedule.

Python Playwright Telegram API GitHub Actions Pillow

github.com/fahimpyto/ZuZu_autobot

WebWeaver

Async website hierarchy crawler that generates interactive, self-contained visual sitemaps with SEO diagnostics — including load times, HTTP status codes, and on-page metrics.

Python Playwright BeautifulSoup Asyncio Jinja2

WHY OPEN SOURCE

Building in public keeps skills sharp, invites feedback from real users, and turns everyday automation problems into reusable tools for the community.

OPEN SOURCE PROJECTS (CONTINUED)

Critical CSS Extractor

Extracts above-the-fold (critical) CSS from web pages using Chrome DevTools Protocol to boost Core Web Vitals — improving LCP and FCP scores for better SEO rankings.

- Python
- Playwright
- Chrome DevTools Protocol
- Core Web Vitals

github.com/fahimpyto/critical_css_extractor

HeadingHunter

Professional SEO heading analysis tool that extracts and validates HTML heading structure (H1-H6) along with critical SEO meta tags. Built with Playwright for accurate rendering of JS-heavy sites.

- Python
- Playwright
- BeautifulSoup
- SEO
- CLI

github.com/fahimpyto/HeadingHunter

CAE Content Compare by JS

Detects content gaps caused by JavaScript rendering failures by comparing how a webpage renders with and without JavaScript, identifying content search engines might miss.

- Python
- Playwright
- BeautifulSoup
- Web Scraping

github.com/fahimpyto/CAE_content_compare_by_JS

metascrub

Strips AI metadata from images generated by ChatGPT, DALL-E, Midjourney, Stable Diffusion, ComfyUI, Adobe Firefly, and more. Optionally injects realistic camera EXIF or design-app metadata.

- Python
- CLI
- EXIF
- C2PA
- PyPI
